

What is the Web and Internet

Contents:

- **Definition of the Internet:** A global network of interconnected computers that communicate using standardized protocols (TCP/IP).
- **Definition of the Web:** The World Wide Web (WWW) is a system of interlinked hypertext documents accessed via the Internet using a browser.
- **Difference between Internet and Web:**
 - Internet = Infrastructure (hardware, networks, cables).
 - Web = Service that runs on the Internet (websites, browsers).
- **How it works:**
 - You type a URL → Browser sends a request → Web server responds with a web page → Browser displays it.
- **Key Components:**
 - Web browsers, servers, protocols (HTTP/HTTPS), and web pages.
- **Examples:**
 - Websites: Google, YouTube, Wikipedia.
 - Services on Internet beyond Web: Email, FTP, VoIP.
